Summary of CV

This section describes briefly a summary of your career in science, academic and research; the main scientific and technological achievements and goals in your line of research in the medium -and long- term. It also includes other important aspects or peculiarities.

El Dr Martin es Investigador Principal del grupo de terapia Génica y Celular en GENYO. Su actividad en los últimos 25 años se ha centrado en desarrollar nuevos sistemas más eficaces y seguros de transferencia génica (vectores lenitvirales y edición genómica) para su aplicación en terapias avanzadas para el tratamiento del cáncer y enfermedades raras. Trabajó en el Instituto de Investigación del Cáncer (ICR) de 1995 a 1997 y en Instituto Windeyer de Ciencias Médicas (UCL) de 1997 a 2002 en Londres (Reino Unido), centrándose en el desarrollo de vectores retrovirales para el desarrollo de estrategias de inmunoterapia frente al cáncer. En 2002 estableció su propio grupo de investigación de Terapia Celular y Genética (CGT) como contratado Ramón y Cajal en IPB López Neyra (CSIC) y desde 2009 en GENYO. Es Secretario de la Junta de la Sociedad Española de Terapia Génica y Celular desde 2019 y Miembro de la comisión académica del Programa de Doctorado en Biomedicina y del Máster de inmunología de la Universidad de Granada desde 2012. El Dr. Martin ha publicado más de 90 artículos científicos en revistas internacionales. Sus artículos han sido citados más de 2320 veces y tienen un índice H = 29. Ha generado 16 patentes relacionadas con la terapia génica-celular e inmunoterapia (7 de ellas licenciadas). En base a varias de estas patentes en ha fundado dos empresas de base tecnológica, LentiStem Biotech y CRISPNA Bio. En los últimos años su grupo se ha centrado en aplicar estos desarrollos en vectores lentivirales y en edición genómica para poder reducir los costes y mejorar la actividad y/o seguridad de los medicamentos de terapias avanzadas (ATMPs) para su aplicación al paciente.

De particular relevancia para este proyecto son los trabajos realizados en el campo de las CAR-T publicados en **Molecular Therapy Oncology**, **Frontiers Immunology**, **Molecular Therapy-Nucleic Acids**, **Bone Marrow Transplant**, **Nature and Cell Metabolism**. Gracias a estos trabajos se ha conseguido financiación para la **realización de un ensayo clínico** a través de la convocatoria de ensayos clínicos independientes del ISCIII, así como financiación para la **construcción de la primera sala GMP para hacer CAR-T editadas genéticamente** de Andalucía, a través de la convocatoria CERTERA.

General quality indicators of scientific research

This section describes briefly the main quality indicators of scientific production (periods of research activity, experience in supervising doctoral theses, total citations, articles in journals of the first quartile, H index...). It also includes other important aspects or peculiarities.

Publicaciones internacionales: 87 publicaciones indexadas en JCR; 76 artículos en Q1; índice H= 29. Más de 2400 citas. Índice de impacto acumulado de 583.

Actividad en Transferencia: 15 patentes, 7 de ellas licenciadas. Fundador de **LentiStem Biotech** (2016) más de 1 millón de inversión pública y privada captado, una Tesis doctoral industrial defendida y otra en curso. Fundador de **CRISPNA Bio** (2022)

Traslación al sistema de salud: - Proyecto ICI (IP Concha Herrera-HRS) para realización de ensayo clínico de AWARI (CAR-T fisiológica generada por mi grupo en colaboración con LentiStem Biotech). - Aprobación de CERTERA-ibsGRANADA. Coordinador de la petición de expansión, aportando los datos necesarios para justificar la viabilidad de generar un producto alogénico CAR-T (TCRKO) y de generar una sala GMP para edición genética en el H. Virgen de las Nieves de GRANADA. - FOMENTO DE LA INVESTIGACIÓN EN EL SNS: Dos contratos Nicolas Monardes (Dr Per Anderson y Dr Karim Benabellah) desde mi grupo de investigación, además de mas de 8 proyectos de investigación en colaboración con Hospitales

Documentos científicos y técnicos: Editor de un libro, Autor de: - 8 capítulos de libro, -7 artículos en revistas de difusión nacional; director de 8 Tesis fin de Grado, 29 Tesis Fin de Master, 2 Tesis doctorales en el extranjero (UCL-Londres-UK) y 14 Tesis doctorales en España (UGR).

Trabajos presentados en congresos: 54 ponencias invitadas; 25 presentaciones orales; 71 presentaciones en posters

Organización y gestión de actividades de I+D (academia): - Coordinador Programa Terapia génica red RICORS-TerAv (2022-actualidad); - Secretario de la Junta directiva de la Sociedad Española Terapia Génica y Celular (2018-actualidad); - Coordinador área Terapias Avanzadas ibs.GRANADA (2023-actualidad); - Coordinador línea estratégica de investigación básica-traslacional del plan de diseño y traslación de Terapias Avanzadas en el SSPA(2024); - Miembro del comité científico ibs.GRANADA (2023-actualidad); - Coordinador de dos cursos pertenecientes a Máster oficiales de la Universidad de Granada (2012-actualidad); - Vocal de la comisión Académica del Programa de doctorado en biomedicina (2015-2022); - Miembro de la Junta de Centro de GENYO (2023-actualidad); - Tribunal en mas de 26 Tesis doctorales; - Editor asociado de Frontiers Immunology (IF=8.8), Frontiers in oncology (IF=6.2) and Cancers (IF=6.5); Revisor de revistas internacionales de prestigio (Blood, Human Molecular Genetics, Moleculr Therapy, Human Gene Therapy, etc); Revisor de proyectos para organismos nacionales (ANEP, Agencia para la Calidad del Sistema Universitario de Castilla y León,) e internacionales (Innovative Medicines Iniciative, FET; Wellcome Trust, Swiss National Science Fundation, Fundaçao para a ciencia e a Tecnología (FCT), Netherlands Organisation for Health Research and Development.)

Organización y gestión de actividades de I+D (empresa): - 3 Contratos con empresas (PX'Pharmaceutics, Canvax y LentiStem Biotech); - Creación de dos empresas de base tecnológica: LentiStem Biotech y CRISPNA Bio.

Organización congresos y eventos: - V congreso de la Sociedad Española de Terapia Génica y Celular (Granada-2009); I International Symposium on Cell and Gene-based Therapies (Granada 2012); - II SPring School of the European Society of Gene and Cell Therapy (Granada 2017). UNISTEM DAY: Europa unida por la ciencia (2016; 2017; 2018; 2019;2022; 2023)

Summary of professional activity

Dr Francisco Martín is Principal Investigator of the Gene and Cell therapy group at GENYO. His activity during the last 25 years has been focused on developing new, more efficient and safer gene transfer systems for its application in the treatment of cancer and rare diseases. He worked at the Institute for Cancer Research (ICR) from 1995 to 1997 and later at the Windeyer Institute of Medical Sciences (UCL-London-UK) for another 5 years. His work in that period was focused on the development of targeted retroviral vectors for the development of immunotherapy strategies against cancer. In 2002 he moved back to Spain as team leader of the Cell and Gene Therapy (CGT) group at IPB López Neyra (CSIC). Since 2009 he is Principal Investigator at GENYO first as team leader from the Fundación Progreso y Salud and from 2022, as professor in Granada University.

Plurality, interdisciplinarity and teaching complexity

Teachers in the Master's and PhD program at the Basic Biomedical Sciences Corporation of the University of Antioquia (UdeA), Medellin-Colombia. In this same university, I collaborate in the realization of two research projects in Alzheimer (code 1115-844-670062, contract 830-2019) and Parkinson (code 15829-2017) led by Dr. Marlene Jimenez-Del-Rio, MSc, DSc & Dr. Carlos Velez-Pardo, MSc, DSc. In the same line, I collaborate with the Faculty of Medicine of the Autonomous University of Queretaro (Mexico) participating in the training of doctors of this University.

In Spain, I am a member of the academic committee of the PhD Program in Biomedicine, and of the Master in Research and Advances in Molecular and Cellular Immunology of the University of Granada. I belong to the internal quality assurance committee of the same Master. Since 2012, I have been teaching an average of 6 credits per year in undergraduate (Medicine) and graduate (in three different Masters of the biomedicine program) at the UGR.

7 **Title registered industrial property:** Lent-On-Plus system for conditional expression in human Stem Cells

Description of qualities: The present invention refers to improved gene transfer vectors for gene therapy and basic research. Particularly, the present invention relates to new DNA sequences capable of improve expression regulation and avoid silencing of gene transfer vectors (viral or non-viral). More particularly, the present invention refers to new combinations of DNA sequences capable of improve expression regulation and avoid silencing of gene transfer vectors (viral or non-viral) in mammalian stem cells. More particularly, the present invention refers to new combinations of DNA sequences capable of improve expression regulation and avoid silencing of gene transfer vectors (viral or non-viral) for gene therapy applications

Transferencia e intercambio de conocimiento

My key research contributions as First or corresponding author are: 1- **The discovery of the first LINE element in T cruzi and the demonstration of a potential endonuclease activity of these elements in all species.** This finding led to a new model for the biology of LINE elements and to a final demonstration that all LINE elements have endonuclease activity that is required for their mobilization. 2- **The discovery of a HIV-1 restriction to infect undifferentiated monocytes and its application to lentiviral vectors transduction.** This finding led to new studies investigating restriction factors involved in HIV-1 infection, crucial not only in the understanding of HIV-1 biology but also to improve lentiviral vectors efficiency and safety. 3- **The redirection of retroviral vectors to specific cancer cells in vitro and the finding of the barriers to apply these approaches in vivo.** 4- **The discovery of a new surface marker (GARP) for mesenchymal stromal cells (MSCs) required for TGF-beta- proliferation and survival.** 5- **The Development of new cellular models and delivery tools to improve the efficiency and safety of genome editing tools.** Gracias a estos trabajos se realizó una Tesis doctoral internacional y se Incorporaron las técnicas de edición genómica y su aplicación a terapia génica en GENYO desde 2015. 7- **Generación de la plataforma TCR-like para mejorar eficacia y/o seguridad de células CAR-T.** La aplicación de los vectores lentivirales AW a la generación de células CAR-T fueron la base de una patente, de la creación de una línea estratégica nueva en la empresa LentiStem Biotech y la base del proyecto de investigación clínica independiente ICI22/00015. 8- **Platform LentOnPlus: First all-in-one inducible system based on the natural TetR repressor (without transactivators) and its application for the generation of inducible ATMPs for clinical applications.** This platform has been validated for the generation of inducible 4th generation CAR-T cells (iTRUCKs) with improved results in lymphoma and pancreatic

cancer. 9- **The generation of a platform to produce universal-genome-edited CAR-T cells for the treatment of patients that do not compile with the requirements to be treated with commercial CAR-T.** These results were the basis of a PhD Thesis and have been largely the basis for the approval of the expansion phase of the project submitted to CERTERA by the Hospital Virgen de las Nieves to cover the costs to build and equip the first GMP room in Andalusia to generate genetically edited CAR-T cells. 10- **The generation of a novel knock-in strategy (named KI-Ep) capable of achieving transgene regulation of the inserted cassette through the acquisition of natural occurring epigenetic marks.** In addition to the potential applications to control transgene expression for gene therapy applications, this finding has implications in several biomedical fields. For instance, it could help to understand the biology of integrative viruses (like HIV-1) and transposable elements
